Structured programming The textbook by Loudon and Lambert emphasizes that exception handling differs from structured programming Structured programming is a programming paradigm aimed at improving the clarity, quality, and development time of a computer program by making specific disciplined use of the structured control flow constructs of selection (if/then/else) and repetition (while and for), block structures, and subroutines. exception sequencer with the semantics discussed above 830455fd5d

The sockpuppetry in the AfD is not relevant, since those accounts made no arguments anyway. The misunderstanding of WP:BIO isn't really relevant either, because there were other arguments to delete and no reason to believe that the AfD hinged on that misunderstanding. Essentially the whole thing comes down to the argument that players at this level are routinely deleted. I'm not convinced that's true, and in any case a Google

Goto The jumped-to locations are usually identified using labels, though some languages use line numbers. org. McGraw-Hill. Many languages support the goto statement, and many do not (see § language support). At the machine code level, a goto is a form of branch or jump statement, in some cases combined with a stack adjustment. It performs a one-way transfer of control to another line of code; in contrast a function call normally returns control. "Labels as Values Using the GNU Compiler Collection (GCC)".
