The book is a collection of articles that constitute a "study ... of controversial and often little-known happenings in science and technology, with an emphasis on the wayward activities of those who dabble in fringe science." The material is organized in three sections, "Our Ingenious Forebears," "Beasts of Now and Then," and "Scientists, Mad and Otherwise." The first debunks extravagant occult and pseudoscientific claims regarding ancient civilizations while highlighting these cultures' actual accomplishments. The second performs much the same function in regard to biology, focusing on elephants, claims regarding the survival of dinosaurs into the present day, and past extinction events. The third explores the distinction between science and pseudoscience as illustrated in the lives of a number of scientists holding extreme views.

The game was invented in the United States, and more than 110 million copies of Mad Libs books have been sold since the series was first published in 1958.
