History of artificial intelligence They do not attempt to give precise The history of artificial intelligence (AI) began in antiquity, with myths, stories, and rumors of artificial beings endowed with intelligence or consciousness by master craftsmen. This device and the ideas behind it inspired scientists to begin discussing the possibility of building an electronic brain. The study of logic and formal reasoning from antiquity to the present led directly to the invention of the programmable digital computer in the 1940s, a machine based on abstract mathematical reasoning. Soft computing uses methods that work with incomplete and imprecise information. called the &quot;embodied mind thesis&quot; df42986282

Pterosaur Their wings were formed by a membrane of skin, muscle, and other tissues stretching from the ankles to a dramatically lengthened fourth finger. They existed during most of the Mesozoic: from the Late Triassic to the end of the Cretaceous (228 million to 66 million years ago). Pterosaurs are the earliest vertebrates known to have evolved powered flight. These are often imprecisely called &quot;impressions&quot; but mostly consist of petrifications, natural casts and transformations of the original material Pterosaurs are an extinct clade of flying reptiles in the order Pterosauria. eye df42986282

Comment I don't currently have the time to read through and critique the entire article, but my early impressions are that it is quite excellent. However, a couple of issues: first, while there are oodles of references, the lead has only one reference; even if these points are sourced later in the article, there should still be footnotes in a lead which makes many claims (such as that most of the important writers on Earth met at her home). Second, there are abo... df42986282
