Early versions of the vehicle were designed for ground launch, but later versions were intended for use only in space. The design effort took place at General Atomics in San Diego, and supporters included Wernher von Braun, who issued a white paper advocating the idea. NASA also created a Mars mission profile based on the design, proposing a 125 day round trip carrying eight astronauts with... In energy metabolism, glucose is the most important source of energy in all organisms. Glucose for metabolism is stored as a polymer, in plants mainly as amylose and amylopectin, and in animals as glycogen. Glucose circulates in the blood of animals as blood sugar. The naturally occurring form is d-glucose, while its stereoisomer l-glucose... Statistics Statistics deals with every aspect of data, including the planning of data collection in terms of the design of surveys and experiments. Populations can be diverse groups of people or objects such as "all people living in a country" or "every atom composing a crystal". Addison-Wesley, ISBN 978-0-201-15619-5. "description of a state, a country") is the discipline that concerns the collection, organization, analysis, interpretation, and presentation of data. 1–3 Hays, William Lee, (1973) Statistics for the Social Sciences, Holt, Rinehart and Winston, p. In applying statistics to a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model to be studied. xii, ISBN 978-0-03-077945-9 Statistics (from German: Statistik, orig. pp 59cd5a2fb2

Project Orion (nuclear propulsion) 5 billion. Non-nuclear tests were conducted with models, with the most successful test occurring in late 1959, but the Project Orion was a study conducted in the 1950s and 1960s by the United States Air Force, DARPA, and NASA into the viability of a nuclear pulse spaceship that would be directly propelled by a series of atomic explosions behind the craft. Following preliminary ideas in the 1940s, and a classified paper co-authored by physicist Stanislaw Ulam in 1955, ARPA agreed to sponsor and fund the program in July 1958. predicted development cost of \$1 59cd5a2fb2

Trachea The epiglottis closes the opening to the larynx during swallowing. Philadelphia, PA: Holt-Saunders International. The trachea extends from the larynx and branches into the two primary bronchi. Body. (1998). The trachea is formed by a number of horseshoe-shaped rings, joined together vertically by overlying ligaments, and by the trachealis muscle at their ends. 336–337. : tracheae or tracheas), also known as the windpipe, is a cartilaginous tube that connects the larynx to the bronchi of

Pi 3. Differential Geometry. ; Chapter 6. Kobayashi, Shoshichi; Nomizu, Katsumi (1996). Vol. 2 The number π (; spelled out as pi) is a mathematical constant, approximately equal to 3.14159, that is the ratio of a circle's circumference to its diameter. It appears in many formulae across mathematics and physics, and some of these formulae are commonly used for defining π , to avoid relying on the definition of the length of a curve. John von Neumann that involved geometry "in the global sense", topics such as topology, differential geometry and harmonic integrals, algebraic geometry and other such John von Neumann (von NOY-m?n; Hungarian: Neumann János Lajos [?n?jm?n ?ja?no? ?l?jo?]; December 28, 1903 – February 8, 1957) was a Hungarian and American mathematician, physicist, computer scientist and engineer. His analysis of the structure of self-replication preceded the discovery of the

structure of DNA. Von Neumann had perhaps the widest coverage of any mathematician of his time, integrating pure and applied sciences and making major contributions to many fields, including mathematics, physics, economics, computing, and statistics. He was a pioneer in building the mathematical framework of quantum physics, in the development of functional analysis, and in game theory, introducing or codifying concepts including cellular automata, the universal constructor and the digital computer 59cd5a2fb2

Glucose Cyclic forms of glucose In solutions, the open-chain form of glucose (either "D-quot; or "L-quot;) exists in Glucose is a sugar with the molecular formula $C_6H_{12}O_6$. It is the most abundant monosaccharide, a subcategory of carbohydrates. It is made from water and carbon dioxide during photosynthesis by plants and most algae. Glucose is often abbreviated as Glc. giving a positive reaction with the Fehling test. It is used by plants to make cellulose, the most abundant carbohydrate in the world, for use in cell walls, and by all living organisms to make adenosine triphosphate (ATP), which is used by the cell as energy 59cd5a2fb2

Cellulose The cellulose content of cotton fibre is 90%, that of wood is 40–50%, and that of dried hemp is approximately 57%. Cellulose is the most abundant organic polymer on Earth. Archived from the original on November 16, 2009. Cellulose is an important structural component of the cell walls of green plants, many forms of algae, and the oomycetes. Holt-Giménez E. Retrieved September 5, - Cellulose is an organic compound with the formula $(C_6H_{10}O_5)_n$, a polysaccharide consisting of a linear chain of several hundred to many thousands of $\alpha(1\rightarrow4)$ linked D-glucose units.
