At the same time, there is increased pressure to improve manufacturing process yields, production efficiency, and resource utilization. This book provides a road map for building the integrated technology environment to evaluate existing products, manufacturing processes and system design tools. Such an IPPSD infrastructure will permit effective and efficient predictions of complete product design, manufacturing process design, and customer satisfaction. Much of the technology required to meet these needs already exists, but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not. These approaches involve the use of simulation, modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers, manufacturers, and suppliers to work within a comprehensive network of shared knowledge. These approaches are integrated product, process, and system design (IPPSD) initiatives which will greatly enhance the manufacturing competitiveness of the economy. The IPPSD infrastructure consists of virtual workstations, servers and a suite of simulation, quantitative, computational, analytical, experimental and qualitative tools. The need exists in the private sector and government manufacturing sites to reduce product development time, production lead times, inventory, and non-value added activities. This book details innovative approaches that will significantly improve design/manufacturing technology development and deployment capabilities for civilian and defense applications 8bf3ed9eec

Here for the first time, Alfred Reckendrees tells the fascinating story based on comprehensive archive material. After the Second World War, the Company lost its international business for the second time. Everyone knows NIVEA. The firm lost its international business in two world wars and during the Nazi period it was exposed to anti-Semitic attacks. However, the US business, which generated most of the firm's profit, was confiscated during the First World War. "Beiersdorf survived the Nazi regime; it could even take advantage of the economic opportunities it offered. It was not until 1997 that Beiersdorf regained control of all the trademarks worldwide. Today, you can find Beiersdorf Brands in every household. After the war, Beiersdorf had to build up its international business again from scratch. It all started in 1882 with a new plaster developed by pharmacist Paul Beiersdorf. The Beiersdorf story began in 1882. In 1933, the executive board and shareholders protected the "Jewish" Company against anti-Semitic attacks by means of "self-Aryanization. Beiersdorf had to start from scratch twice, and yet today it is a global player. Until the 1990s, the Company produced medicines and dressings as well. Later, Oscar Troplowitz turned the small factory into a Brand Company with international operations. They include NIVEA, Hansaplast, 8x4, Eucerin, and La Prairie; also tesa, the adhesives specialist, belongs to Beiersdorf. But only a few people are familiar with the Hamburg-based Company that created the "crème de la crème" and other successful Brands. He describes the economic challenges and political conflicts that the key actors had to overcome, and presents the Company strategies and reorientations, which are closely interwoven with Germany's multifaceted history 8bf3ed9eec
