Even Rutherford told Bohr that he was struggling "to form an idea of how you arrive The periodic table is an arrangement of the chemical elements, structured by their atomic number, electron configuration and recurring chemical properties. For example, all elements in group (column) 18 are noble gases that are largely—though not completely—unreactive. In the basic form, elements are presented in order of increasing atomic number, in the reading sequence. spectroscopy and chemistry was not usual among theoretical atomic physicists 2259e3fc21
