Potassium alum p. Archived Potassium alum, potash alum, or potassium aluminium sulfate is a chemical compound defined as the double sulfate of potassium and aluminium, with chemical formula $KAl(SO_4)_2$. John Wiley & Sons. It is commonly encountered as the dodecahydrate, $KAl(SO_4)_2 \cdot 12H_2O$. It crystallizes in an octahedral structure in neutral solution and cubic structure in an alkali solution with space group $Pa\bar{3}$ and lattice parameter of 12. (27 April 2015). The compound is the most important member of the generic class of compounds called alums, and is often called simply alum. ISBN 9781118763780. Introduction to Cosmetic Formulation and Technology. 18 Å. Gabriella; Alexander, Kenneth S. 324 9d6b162b50

Properties of metals, metalloids and nonmetals Most or some elements in each category share a range of other properties; a few elements have properties that are either. Metalloids are metallic-looking, often brittle solids that are either

semiconductors or exist in semiconducting forms, and have amphoteric or weakly acidic oxides. All elemental metals have a shiny appearance (at least when freshly polished); are good conductors of heat and electricity; form alloys with other metallic elements; and have at least one basic oxide. Typical elemental nonmetals have a dull, coloured or colourless appearance; are often brittle when solid; are poor conductors of heat and electricity; and have acidic oxides. Nicol (eds), Science and technology of high pressure: Proceedings of the International Conference on High Pressure Science and Technology (AIRAPT-17), The chemical elements can be broadly divided into metals, metalloids, and nonmetals according to their shared physical and chemical properties 9d6b162b50
