On 3 October 2006, North Korea announced its intention to conduct a nuclear test. The blast is generally estimated to have had an explosive force of less than one kiloton, and some radioactive output was detected. United States officials suggested the device may have been a nuclear explosive that misfired. cdfec3e65f

All have so far been positive. Since then, 27 leap seconds have been added to UTC, with the most recent occurring on December 31, 2016. The UTC time standard, widely used for international timekeeping and as the reference for civil time in most countries, uses TAI and consequently would run ahead of observed solar time unless it is reset to UT1 as needed. The leap second was introduced in 1972. The leap second facility exists to provide this adjustment

Initially, the audience knows very little about Beckett, much as he knows little about himself due to holes in his memory dubbed the "Swiss cheese effect"—a side effect from the time travel (an effective trope to allow the writers to add to the character as the show went on). Eventually, it is revealed that Beckett is a true Renaissance Man, equally good at math and science and the arts. His skills allow him to adapt to the various situations in which he finds himself, although many of those situations still take him off guard with comical results. cdfec3e65f

Turing test In the test, a human evaluator judges a text transcript of a natural-language conversation between a human

and a machine. The results would not depend on the machine's ability to answer questions correctly, only on how closely its answers resembled those of a human. 3. Russell & Norvig 2010, p. Since the Turing test is a test of indistinguishability in performance capacity, the verbal version generalizes naturally to all of human performance capacity, verbal as well as nonverbal (robotic). "(PDF) The Truly Total Turing Test". Communications of the ACM The Turing test, originally called the imitation game by Alan Turing in 1949, is a test of a machine's ability to exhibit intelligent behaviour equivalent to that of a human. "A leap from artificial to intelligence". The evaluator tries to identify the machine, and the machine passes if the evaluator cannot reliably tell them apart. Cacm Staff (2017) cdfec3e65f
