General-purpose computing on graphics processing units Proceedings of the 7th International Conference on Principles and Practice of Programming in Java. ACM, 2009. The use of multiple video cards in one computer, or large numbers of graphics chips, further parallelizes the already parallel nature of graphics processing. Henriksen, Troels, Martin Elsmann, and Cosmin E General-purpose computing on graphics processing units (GPGPU, or less often GPGP) is the use of a graphics processing unit (GPU), which typically handles computation only for computer graphics, to perform computation in applications traditionally handled by the central processing unit (CPU) a9210744b4
